LEGGERE LE ISTRUZIONI PRIMA DI MONTARE IL RADIATORE RACING:

BEFORE INSTALL THE NEW RACING RADIATOR READ CAREFULLY:

1. Unload the old radiator to replace
2. Disconnect and insulate the electrical connection of water or oil sensor
3. Remove and replace, on racing radiator, the rubber shock-absorber
4. Place the new radiator and absolutely check that the new spare part don't touch the moto-frame. In any case if occur it put rubber absorber between parts.
5. Fasten the radiator on the moto-frame
6. Connect all pipes (water and oil);ensure himself that all metallic band are correctly placed
7. Absolutely check no contact between radiator and front-wheel when press at maximum the shock absorber
8. Introduce the cooling fluid. **WARNIG**: utilize only racing cooling fluid.
9. Switch on the motor and eventually add cooling fluid
10. Close the radiator cup and increase the fluid temperature till 70°C
11. Wait for temperature decreasing and recheck the cooling fluid level.Eventually add cooling fluid
